[Program](#)

This seminar at the TU Delft Faculty of Aerospace Engineering will provide the necessary tools to develop proposals aligned with European calls for proposals and strengthen collaboration in scientific networks.

The Practical Seminar on Fund Acquisition and Participation in European Projects targets the scientific community and offers essential knowledge for accessing international funding. Participants will receive guidance on developing proposals that align with European calls and strategies to enhance collaboration in international networks.

The event will start with a keynote address by Juan Carlos Cortés Pulido, Director of the Spanish Space Agency. This will be followed by several roundtable discussions where funding experts will explain how to access European funds, outline evaluation processes, and share success stories from programs like *Horizon Europe*.

Attendees will learn methodologies for creating strong proposals and best practices for forming strategic alliances with international entities. The day will conclude with a discussion on proposal formulation and the presentation of key findings, providing participants with the opportunity to exchange ideas and enhance their knowledge.
